

NATURAL ELEGANCE BLEACH

Professional bleaching

In-office kit and Home / Office kits

New

For the perfect smile!

Due to the natural ageing process, colour of the teeth changes over time. Staining can occur due to tobacco, tea, coffee, red wine, soft drinks or medical treatments. Bleaching can remove this.

Natural Elegance bleaching product is made of Carbamide Peroxide. This base material has been used previously for the disinfection of the oral cavity and as an additional benefit, the bleaching effect was discovered. Tooth discolouration is removed due to a chemical reaction, activated by oxygen.

Bleaching can be done without damaging health.

Suitable for non-vital bleaching treatments also: After treatment the dentist needs to fill the cavity with temporary cement (eg. HS-9003702).
